

Production System™

Metal 3D printing for mass production.
Designed for throughput.

Reserve—Production System™ reservations require a \$5,000 non-refundable deposit. For pricing and information about international reservations, please contact our sales team.

Powered by Single Pass Jetting™

100x faster

Breakthrough Single Pass Jetting™ (SPJ) process delivers speeds up to 8200 cm³/hr —100x faster than laser-based systems. With zero tooling needed, it's the fastest way to manufacture complex metal parts.

20x lower cost

Low-cost MIM powder, high throughput, and simple post-processing deliver per-part costs that are competitive with traditional manufacturing processes and up to 20x lower than today's metal 3D printing systems.

Printer specs

Resolution

<50 µm voxels

Build area

h 330 x w 330 x d 330 mm
(13 x 13 x 13 in)

Speed

Up to 8200 cm³/hr
(500 in³/hr)

System features

Automated, closed-loop powder handling

Semi-automated depowdering

Modular build box for continuous
production

Self-supported 3D nesting

Competitive cost-per-part

The Production System is ideal for complex, high-performance metal parts at high volumes. Since no tooling is needed, it can outperform traditional manufacturing processes like casting while adding major benefits of additive manufacturing like just-in-time production and mass customization.
